

Face Tracking

with Identity Lock

Build the vision system first. Motor-based correction comes later.

This week's objective

Build a working face-tracking system that remains locked on the identified person. At this stage, do not implement motor-based correction.

This week's instructions

LEARNING LOCATION

Your respective classrooms

MATERIALS

HD camera shared last week during Part 1

WORK STYLE

Self-learning; work per group; submit individually

01

Read and follow [Guide Part 2](#)

Use the guide as the main reference for this week's construction.

ACCESS NOTE

If Chrome restricts access to the ResearchGate document, switch to Microsoft Edge or Firefox. You may also use a VPN. Resolve access issues early - everyone is expected to read the guide.

Weekend assessment

At the end of the practice, you will submit evidence for verification and update your existing repository.

1

Capture clear proof

Upload a video and/or images showing that face tracking with identity lock works.

2

Update your repository

Push the required additional files to your existing repository.

3

Submit the form

The assessment form link will be shared over the weekend.
